

European Chafer Information Update

May 9, 2005

At the April 11, 2005, at the City Council Meeting, Deborah Henderson, a consultant working with the city of New Westminster, reported on the effectiveness of using Nematodes (microscopic worms) to control the damages caused to turf by the European Chafer grubs.

Ms. Henderson and Claude LeDoux, Parks and Recreation Horticultural Manager, also review practical measures to support healthy lawn care practices.

The updated Chafer information and study results are in the form of a VHS tape that can be borrowed from the New Westminster Library. Additional Chafer information can be located at [www.nwpr.bc.ca-European Chafers](http://www.nwpr.bc.ca-European-Chafers).
